**70 Degree Angle Brackets Are Used For:**

Club Car DS, Precedent and Yamaha Cars

**80 Degree Angle Brackets**

**80 Degree Angle Brackets Are Used For:**

TXT and RXV Model Cars

Hardware length will vary depending on thickness of mounting area. Choose the length of bolt that will penetrate the thickness of front roof support tubes.

## Universal Tray Mounting Guide

This kit is not specific to a car you must measure and make sure of clearances before drilling. We suggest leaving hardware loose and mount everything first than adjust and tighten hardware.

Mark Mounting Holes And Drill With A 9/32" Bit

Set Bracket In Place Measure On Both Sides An Equal Distance For Dash Clearance

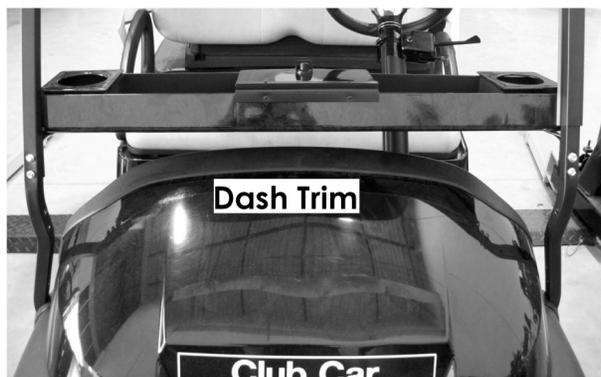

Use The Black Round Head Screw For Mounting Tray To Bracket

Select the angle bracket that best levels the tray per application.

Caution: Wear Appropriate Eye Protection!

Short end flat bracket goes to angled bracket.

Tech Tip: use a clamp on each side for clamping the brackets into place. Set tray on and center everything then mark your holes before drilling.

Raise Or Lower Tray And Brackets To The Desired Location. Make Sure You Allow Dash Trim Clearance.

Assemble Brackets In This Configuration
